1. INTRODUCTION

1.1. Purpose

This Waste Management Plan (WMP) was prepared by “REC International” (hereafter called “REC”) which is applicable to the construction phase of the Project.

The key objectives of this WMP is to ensure that:

- All type of wastes generated during Project construction activities are controlled, handled, stored, transported and disposed of in compliance with Turkish Regulations and Lender requirements.
- The potential to cause harm to human health and the environment is minimsed,
- Operational costs and any potential liabilities that may arise from waste handling operations are reduced or minimised.

1.2. Scope

The scope of this plan covers the WMP’s implementation resides with REC, and REC’s sub-contractors & suppliers will be required to demonstrate compliance of their activities against this plan. This plan is intended to be ‘living document’ that can be refined and modified as situations change. The Special Purpose Vehicle (SPV) will have the main role in monitoring of E&S performance of all project participants during implementation of works and services.

2.1. National Requirements

- Regulation on Waste Management
- Regulation on Control of Excavated Soil, Construction and Demolition Wastes
- Communiqué on Recycling of Certain Non-hazardous Wastes
- Packaging Waste Control Regulation
- Waste Oil Management Regulation
- Regulation on Control of Waste Batteries and Accumulators
- Regulation on Control of Waste Electrical and Electronic Equipment
- Regulation on Control of End-of-Life Tires
- Regulation of Control of Waste Vegetable Oils
- Regulation on Medical Waste Control
- Zero Waste Regulation
- Regulation on Mining Wastes
- Communiqué on Road Transportation of Wastes

2.2. International Standards

- EBRD (European Bank for Reconstruction and Development) Environmental and Social Policy, including Performance Requirements (EBRD, 2019)

- EBRD Performance Requirement 3: Resource Efficiency and Pollution Prevention and Control
- EBRD Sub-sectoral Environmental and Social Guidelines (i.e., Building and Construction Activities, 2010)
- IFC (International Finance Corporation) Performance Standards (IFC, 2012)
- IFC EHS General Guidelines (IFC, 2007)
- IFC Performance Standard (PS) 3: Resource Efficiency and Pollution Prevention
- IFC Guidance Note 3 on Resource Efficiency and Pollution Prevention
- IFC PS4: Community Health, Safety and Security
- IFC Environmental, Health, and Safety Guidelines for Toll Roads (April 2007)

2.3. Links to other Plans/Procedures

This procedure is supported by the other plans/procedures of the Project-specific ESMS. Those of particular relevance to this procedure are as follows:

- REC-İSG-ÇYS-KMO-PL-09 Surface Water and Groundwater Management Plan
- REC-ÇYS-KMO-PL-20 Wastewater Management Plan
- REC-ÇYS-KMO-PL-10 Soil Management Plan
- REC-ÇYS-KMO-PL-17 Landscape Management Plan
- REC-ÇYS-KMO-PL-19 Pollution Prevention Plan
- REC-İSG-ÇYS-KMO-PL-11 Quarry Management Plan
- REC-İSG-ÇYS-KMO-PL-18 Blasting Management Plan
- REC-ÇYS-KMO-PL-03 Medical Waste Management Plan
- REC-İSG-ÇYS-KMO-PL-16 Camp Management Plan
- REC-İSG-ÇYS-KMO-PR-09 HSE Monitoring, Assurance and Verification Procedure

3. ROLES AND RESPONSIBILITIES

REC Project Manager

The REC Project Manager has the overall responsibility for the implementation of the Project activities stated in this plan. They will be suitably competent and have a strong understanding of construction best practice aligned with national law and applicable Lender requirements.

The REC Project Manager is accountable for overall ESHS performance and making the human and financial resources available to ensure compliance with Project ESHS requirements.

REC Construction Manager

The Construction Manager is responsible for the implementation of ESHS mitigation measures outline in this plan through method statements and site working practices.

The Construction Manager will ensure that:

- Construction activities (undertaken by REC itself or by the subcontractors), are in compliance with Project ESHS requirements;
- All construction staff receive appropriate safety and environmental training, prior to commencement of work;

- A thorough investigation is carried out for any accidents or incidents which may occur;
- A self-regulatory review and/or audit of implementation of this plan is carried out on a regular basis.
- Relevant authorities are informed immediately in case of damage to utilities such as underground and aboveground electricity lines, water lines, gas lines, oil pipelines, etc;
- The worksites are secured (secured trenches, temporary bridges, traffic controls, barricades, signs and warning lights, etc.); and
- Appropriate site boundary- and access controls are implemented near settlements to prevent unauthorized entry to construction or activity sites especially by children (e.g., fencing of construction section in the vicinity of settlements or communities).

REC E&S and H&S Managers

- Monitoring and assurance of the REC's subcontractors ESHS system performance and requirements of the Project.
- Developing the CESMP and other ESHS plans and procedures and assures that Project requirements are considered.
- Reviewing subcontractors and suppliers ESHS documentation to ensure that they are aligned with Project ESHS Requirements.
- Monitoring performance through Key Performance Indicators (KPIs), reports, audits, and meetings.
- Reporting on ESHS performance to REC Project management, SPV ESHS Management, and other related parties.
- Establishing Emergency Response Teams and defining roles and responsibilities of the team members.
- Ensuring that all ESHS training needs are identified, provided, and recorded.
- Disclosing relevant ESHS information to Project staff and the public and coordinatingactivities for raising awareness.

REC Environmental Engineer and H&S Inpector

- Conduct daily ESHS inspections.
- Ensure that all construction personnel (including subcontractors) working or visiting the site understand the ESHS requirements of the Project and comply fully with them.
- Make sure that ESHS risk assessments are performed prior to the activities.
- Monitor subcontractors' ESHS performance, their compliance to the Project ESHS Requirements.
- Report and record ESHS accidents and incidents to H&S Supervisor.
- Monitor that all personnel (including contractors) have undergone all necessary training.

- Assist subcontractors and suppliers in developing and implementing their site-specific plans and procedures.
- Monitor implementation of all relevant management plans and procedures, including on site.
- Track the impacts of the Project against the Project Objectives and Key Performance Indicators as defined in the HSE Monitoring, Assurance and Verification Procedure (REC-İSG-ÇYS-KMO-PR-08) and Chapter 3 of this Plan and work with the subcontractors where amendments to the mitigation measures are required.
- Identify breaches of management plans, recommend corrective actions.
- Stop work activities in the event of serious breaches of rules that may cause serious impacts on health and safety, the environment, community or on the reputation of the Project. (All workers have the obligation to intervene in case of a dangerous situation and have to report to the supervisor).

4. GENERAL RULES AND IMPLEMENTATION

4.1. Waste Minimization

REC and subcontractors will apply the Waste Management Hierarchy as defined below:

- **Waste avoidance:** Minimising the amount of material that needs to be generated and managed in the first place.
- **Re-use on site:** Where possible, the re-use of excavated materials, excess materials and other wastes within the Project site is to be maximised. This reduces the need to import materials onto the site, reduces the need to find off site re-use or disposal locations and the associated materials handling and transport issues, reduces fuel use and minimises the Project footprint.
- **Re-use off site:** Where all attempts to re-use excavated materials on site have been exhausted, re-use opportunities must be found off site. This includes finding sites that are approved by the relevant planning consent authorities to accept the specific wastes.
- **Recycling and recovery:** Waste recycling (paper, glass, metals, wooden waste, waste tires, batteries etc.) will be promoted within the scope of Project activities and related trainings will be provided. Recyclable wastes will be collected separately and temporarily stored on-site in reserved areas.
- **Disposal:** Disposal is the last and least preferable management option to be considered.

4.2. Type of Wastes and Waste Management

The waste types expected to be generated during construction can be categorized as follows:

- Solid wastes generated by construction activities and camps;
- Sewage wastes generated by construction camps and processes;
- Spoils and inert construction wastes;
- Hazardous wastes; and
- Medical wastes.

4.2.1. Solid Wastes

These wastes will be generated mainly from accomodation and lodging activities (e.g. packages, food wastes, office wastes) and should be disposed of at approved/permitted facilities. REC will identify disposal sites and recycling stations that have been approved by the relevant State Authorities. The list of the licensed waste management facilities in the Project vicinity (226 facilities in total) is presented in Appendix 1.

These sites should be suitable for the waste types and sufficient to the volumes generated without significantly impacting existing capacity of disposal sites and without conflicting with other users. Recyclables (such as paper, card, plastics, glass, and metals) will be segregated from domestic type solid wastes for recovery and recycling and will be sent to licenced recycling facilities or re-used where possible.

4.2.2. Sewage Wastes

This plan has overlaps to Wastewater Management Plan which has management implications.

All wastewater will be discharged into the local/municipal sewage network. In case this cannot be achieved wastewater shall be treated decentrally before discharge to the suitable receiving environment. All wastewater discharges must comply with relevant Turkish legal requirements (Water Pollution Control Regulation 2004, No. 25687) and other Lender Standards (e.g. the IFC General EHS Guidance) before disposal.

4.2.3. Spoils and Inert construction wastes

Construction of the Project and related structures such as the cuttings, earthworks, etc. will generate significant volumes of material from earthmoving and site clearance. The cut and fill balances along the Project route indicates that total amount of surplus material to be disposed will be around 16,5 million m^3. Six surplus material dumpsites are planned to be used for the Project which are listed below:

Table 1. Capacity of Dumpsite

Dumpsite	Capacity (m^3)
Bolluca Dumpsite	5,300,000
Mahmutbey Dumpsite	900,000
Pirinççi Dumpsite	5,000,000
Şamlar Dumpsite	4,400,000
Nakkaş Dumpsite	900,000
Şahintepe Dumpsite	300,000

REC will need to take opinion from relevant authorities (such as Ministry of Agriculture and Forest, municipality of the relevant district and/or province, and/or other authority which has responsibility on possible storage area in any manner) and the material will be stored accordingly. The statutory process is that the relevant authority will determine where the

surplus materials are to be deposited (e.g. in abandoned quarries or borrow pits), and these instructions must be followed by REC and the subcontractors.

In addition to local regulations, Project's ESHS requirements will be followed by REC during management of surplus material and dumpsites.

4.2.4. Hazardous Wastes

All hazardous wastes generated from camp facilities and construction sites will be managed in accordance with Hazardous Waste Management Regulation (Official Gazette Date/Number: 14.03.2005/25755) and Project requirements. These wastes may include chemical wastes (e.g. acids, adhesives, glycols, solvents, paint sludge), contaminated soil, oil filters, fluorescent light tubes, containers of chemicals and hazardous materials, etc. Specific regulation for the following hazardous materials will be also applied.

- **Lead-acid batteries and vehicle accumulators** are expected to be generated from vehicle maintenance areas. These wastes will be managed in accordance with Regulation on Control of Waste Batteries and Accumulators (Official Gazette Date/Number: 31.08.2004/25569). In line with the regulation, all wastes stored in special container at the hazardous waste storage area, then delivered to the licenced recycling / disposal firms via licenced transportation companies.
- **Oil wastes** are expected generated from vehicle maintenance activities. Type 1, Type 2 and Type 3 oil wastes will be determined in accordance with the requirements of Waste Oil Control Regulation (Official Gazette Date/Number: 30.07.2008/26952) Type 1 diesel fuel wastes, and oily wastes will be sent to third parties for recovery or treatment and disposal. In cases where recycling is not a feasible option, these wastes will be processed at licenced hazrdous waste disposal sites.
- **Explosives wastes** might be due to use of explosives during tunnel excavation and hard rock areas along the construction route. Explosive wastes will be stored in their original type of container but marked as waste. They will be handled and disposed of as recommended by the manufacturer, and also in accordance with legislative requirements. Waste explosives discovered along the route will be immediately notified to the state authorities.
- **Radioactive wastes** might be generated from quality control activities for aspahalt works and also from quality control tests of welding as required during construction. Radioactive waste will be returned to suppliers for appropriate management.
- **Electric and Electronical wastes** will be managed as required by Regulation on Control of Electrical and Electronical Goods (Official Gazette: 22.05.2012/28300).

4.2.5. Medical Wastes

Medical wastes from clinics, surgeries, first aid rooms etc. will be kept segregated from any other type of wastes and safely stored in dedicated containers. Containers will be colour-coded according to their contents and made of a combustible material such as plastic or cardboard. These wastes will be disposed of by high temperature incineration in accordance with the requirements of the Control of Medical Waste Regulations (CoMW), therefore REC will only use the licenced authorities take these wastes and disposed accordingly.

This plan has overlaps to Medical Waste Management Plan (REC-ÇYS-KMO-PL-03) which has management implications regarding with medical waste.

4.3. Waste Collection, Segregation and Storage

REC will create Temporary Waste Storage Areas (TWA) where the wastes are generated (e.g. close to construction activities). Waste from construction sites will be transported each day to Waste Collection Areas (WCA) within the Olimpiyat and Sazlıdere Campsites, where wastes are safely stored before disposal.

Suitable waste containers will be provided for each type of waste and clearly labelled according to the content of the containers. REC will ensure that waste is effectively contained and is protected againstt wind, rain and vermin. There will be separate storage containers for recyclables (plastics, glass, ferrous metals, metals, and papers/cupboards etc.). Incompatible chemicals and oils will be kept in separate containers in order to avoid a chemical reaction. Other hazardous wastes (e.g. batteries, contaminated soil, etc) will also be stored in separate containers. The wastes collected in TWAs will be transferred to WCAs for safe storage until they are sent for disposal to licenced waste facilities.

WCAs will have sufficient areas for handling waste containers e.g. by forklifts. The areas will be concrete lined, equipped with separate drainage with spillage control channels and sumps. The hazardous waste storage areas will have their own spillage control bund. The areas will be protected against wind and rain, securely fenced and access to this site will be provided only for authorized persons. These areas will also be labelled as hazardous waste storage areas.

There should be a secure section to keep personal protection equipments, spill kits (e.g. absorbants), emergency equipment (for fire fighting), eyewash and emergency shower and also the Safety Data Sheets (SDSs) for hazardous wastes.

Waste segregation will be maintained at all times, separate storage areas/containers will be provided to ensure continued segregation of wastes.

Storage facilities for hazardous wastes are subject to a permit to be issued by the relevant Governorship as required by Hazardous Waste Control Regulation (Official Gazette Date/Number: 14.03.2005/25755). REC will ensure all such permits are taken and applied.

4.4. Waste Labelling

The waste containers and WCAs will be clearlly labelled with EU Waste Codes for each type of wates. The labels on the containers will as aminimum indicate the type of the waste, where it was originated and where it will be sent e.g. for recycling, treatment or disposal purposes. The hazardous waste containers will also indicate the hazard type.

4.5. Waste Disposal Facilities

The following management practices will be used during the disposal of hazardous and non-hazardous wastes:

- Protocols will be signed with the licensed facilities for the disposal of hazardous and non-hazardous wastes.

- Hazardous wastes will be securely packed and labelled prior to transportation to ensure that wastes can be transported safely to the approved disposal site without risk to those handling the waste or to the environment.
- Licensed disposal facilities will be used for transfer and disposal of hazardous wastes.
- Waste oils will be transported to the licensed processing and disposal/recover facilities. Waste Oil Declaration Form in Appendix of Regulation on Management of Waste Oils will be filled and sent to the Provincial Directorate of Environment, Urbanization and Climate Change (PDoEUCC) until the end of February of the following year.
- Separately collected waste batteries and accumulators will be delivered to the collection points established by enterprises engaged in the recovery, distribution and sales of battery products; or by municipalities.

4.6. Waste Transportation

All transferred hazardous and non-hazardous waste loads will be documented with a numbered Waste Transfer Document containing the following information:

- Waste type and amount
- Waste Code
- Transfer Date
- Carrier License Plate Number
- Disposal place and method
- Waste producer and carrier responsible person information

The Waste Transfer Document will be used by the waste management personnel for all non-hazardous waste shipments and in addition, the MOTAT system will be used over the electronic environment information system for hazardous wastes, special wastes and medical wastes. The Non-Hazardous Waste Acceptance Form to be filled by the final destination site will be sent to the REC to prove that the sent wastes are safely received for recycling and/or disposal.

5. INSPECTION AND MONITORING

All waste-related activities will be monitored by the REC Environmental Engineer on a weekly basis to:

- Confirm that all the loaded waste reaches the designated storage, treatment, recycling or disposal facility,
- Act in accordance with Turkish environmental regulations and Project requirements,
- provide the necessary data for the annual 'waste declaration' to submit to the Ministry of Environment and Urbanization, Climate Change (via MOTAT).

Following monitoring, assurance and verification activities will be implemented on site:

- Regular inspections regarding on-site management of wastes and hazardous materials will be conducted during construction.
- Major non-compliances noticed during the inspections are to be reported.

- In addition to these inspections, internal audits will be conducted quarterly during the construction phase.

Results of inspections and monitoring will be reported to the E&S Manager and Project Manager.

Key performance indicators (KPIs) of this procedure will be monitored, verified and evaluated by the relevant parties in accordance with their responsibilities set forth in the REC-İSG-ÇYS-KMO-PR-08 HSE Monitoring, Assurance and Verification Procedure. Based on monitoring and audit results, corrective actions will be designed and implemented. Performance of these actions will also be monitored and reported.

Table 2. Key performance indicators with regard to WMP and targets.

Resource Efficiency and Pollution Prevention	Monitoring Period	Target (year)
Percentage of environmental monitoring activities carried out with respect to schedule	Quarterly	100 %
Non-hazardous waste generated	Monthly	Decreasing trend per employee
Hazardous waste generated	Monthly	Decreasing trend per employee
Percentage of waste re-used, recycled or recovered	Monthly	50 %
Percentage of construction and demolition waste, waste re-used, recycled or recovered	Monthly	70 %
Percentage of environmental permits received with respect to total required	Monthly	100 %
Number of legal penalties issued by authorities in relation to environmental requirement	Monthly	0
Percentage of environmental inspections carried out with respect to schedule	Monthly	100 %
Number of environmental inspections findings	Monthly	0
Percentage of corrective actions closed out in relation to environmental inspections	Monthly	100 %
Percentage of environmental audits carried out with respect to schedule	annually	100 %

In addition, the following external reporting will be done:

- All environmental and social incidents will be appropriately documented, notified and reported in accordance with established procedures.
- Incident notification and reporting to relevant Turkish regulatory bodies will be performed in line with applicable legislation in force and as stipulated in permits and licenses.

- The Lenders will be notified of incidents pursuant to the terms and conditions agreed upon in the Finance Agreements through SPV.

6. TRAINING

REC will ensure that all field personnel and subcontractors receive adequate training and instruction on waste management requirements relevant to their work so that they adhere to this plan throughout their employment. A general explanation of the principles and conditions regarding waste management will be given to all project personnel throughout this training.

In addition, the field personnel who regularly work with hazardous materials and hazardous waste materials, as well as the personnel implementing this plan, will receive detailed additional training on special transportation, separation, storage, response to spills and disposal, as well as compliance with Turkish regulations and international standards.

Specific training on waste management shall be provided to the workers that will be directly involved in handling and transporting of waste streams onsite. Training should include but not limited to:

- awareness of hazards in working operations and how they are managed;
- potential risks to health and safety;
- precautions to prevent exposure;
- correct use and application of PPE and clothing; and
- appropriate response to emergency conditions, incidents and accidents.

7. REPORTING REQUIREMENTS

The following reporting requirements apply for REC:

- Incident reporting (as necessary, addressed in terms of the Accident and Incident Management Procedure);
- Emergency response reporting;
- Records of annual emergency response training exercises;
- Biannual reports on KPIs and performance trends;
- Monthly reports of relevant training activities completed and attendance registers to be maintained;
- Daily/Weekly/Monthly reports of site inspection activities;
- Audit reports;
- Inspection logs and status of non-compliances; and

In addition, the following external reporting will be done:

- Monthly and biannual ESHS reports on KPIs and performance trends will be submitted to SPV;

- All environmental and social incidents will be appropriately documented, notified and reported in accordance with established procedures to
- Incident notification and reporting to relevant Turkish regulatory bodies will be performed in line with applicable legislation in force and as stipulated in permits and licenses.
- The Lenders will be notified of incidents pursuant to the terms and conditions agreed upon in the Finance Agreements through SPV.
